Welcome to our e-newsletter!

Greetings All!
We have had a busy couple of months at the Institute and have a lot to report. The 7th annual Regenerative Medicine Essentials Course combined this year with the World Stem Cell Summit to co-present a virtual meeting this year that was well received.

We also held a virtual High School Summer Scholars program, but the 21 undergraduate Summer Scholars from across the US joined us for 10 weeks in the lab, following all safety protocols to keep our students and lab workers safe. They recently departed and the extra hum of activity they bring with them is already missed. We look forward to following these bright scholars in the future.

In other news, I want to share the launch of the RegeneraTOR Test Bed. This is a particularly exciting endeavor that will serve as an economic development driver, helping to accelerate the growth of startups and scale up mid-to-large-sized companies with innovative and emerging technologies. Access to state-of-the-art biomanufacturing equipment, industry expertise, and talent to support novel prototyping and commercial product development is available.

Please see below to read more about this as well as some research highlights.

Best Regards -
Anthony Atala
